AND Demo

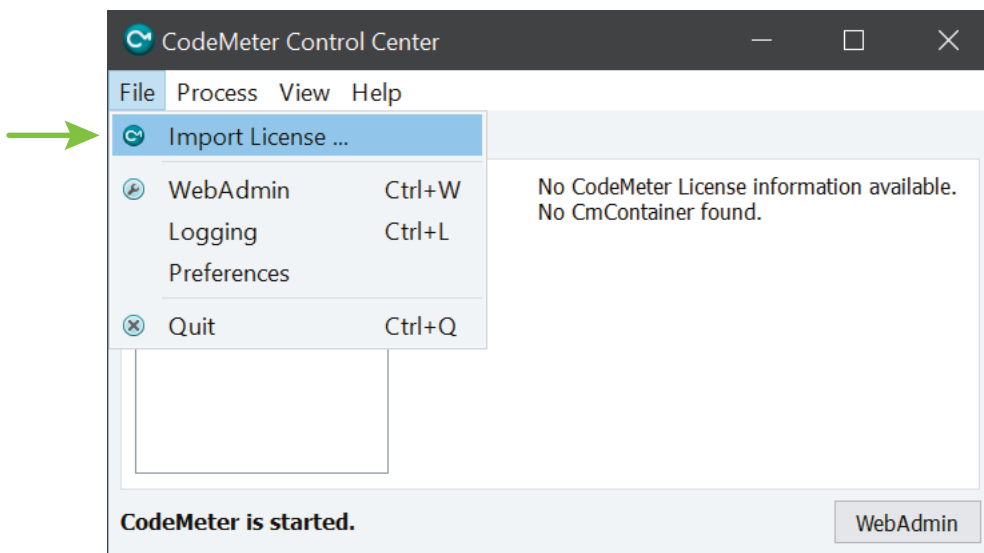

License protection

Installing the WIBU license

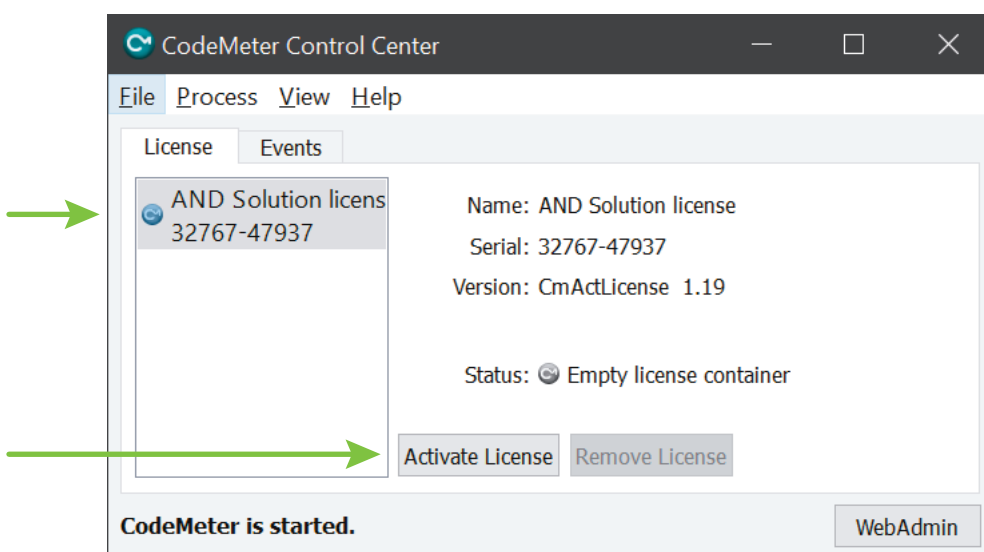

The WIBU management software "CodeMeter Control Center" can be started after successfully installing the AND software by either "Windows Start Menu" > "CodeMeter" > "CodeMeter Control Center" or the "CodeMeter" icon in the taskbar / notification area.

1 Import "License container"

Import the license container by clicking "Import License" and selecting the file "ANDSolution.wbb" from the AND program directory .

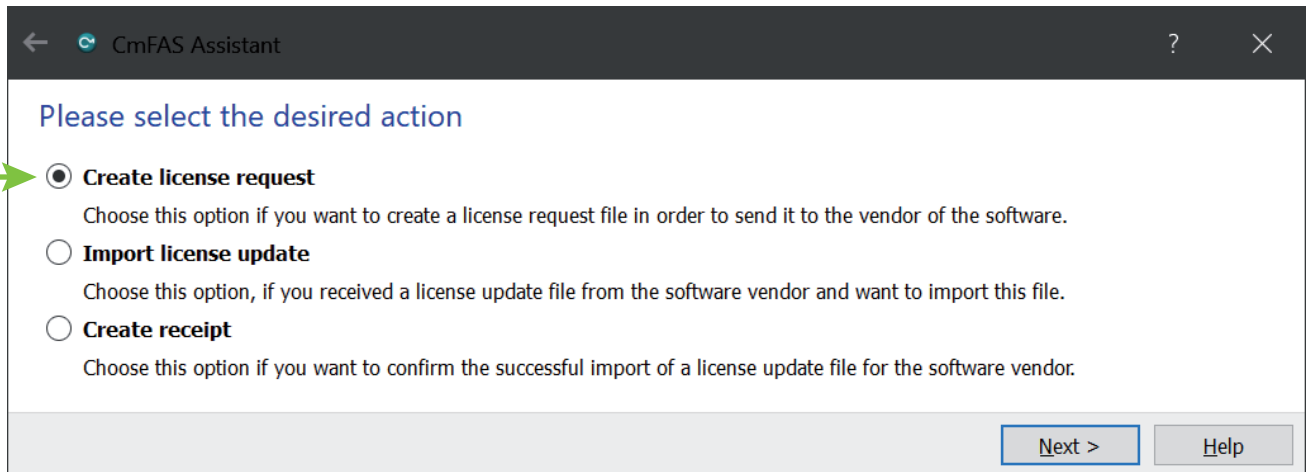

Now a non-activated license container is shown in "CodeMeter Control Center".

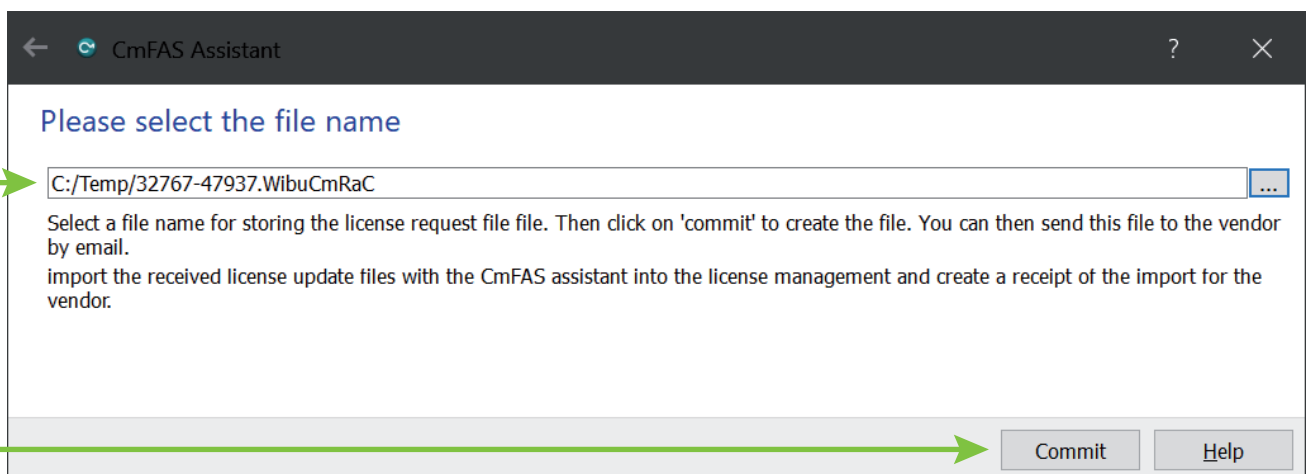

To generate the license request file that needs to be sent to AND Solution GmbH, click "Activate License" to start the "CodeMeter Field Activation Assistant" (CmFAS).

2 Generate license request

In the "CmFAS Assistant" window, click "Next" to begin the procedure. When prompted to choose an action select "Create license request" and click "Next".

Enter the path where the license request file is to be saved. Default is the AND directory where AND was installed – please change it to a directory where you have read/write access. Then click "Commit".

"The License request file has been successfully created."

After this click "Finish" to exit the assistant.

3 Request license update

Please send us an email with the subject "License update" to license@and-solution.com, which has to include the following data:

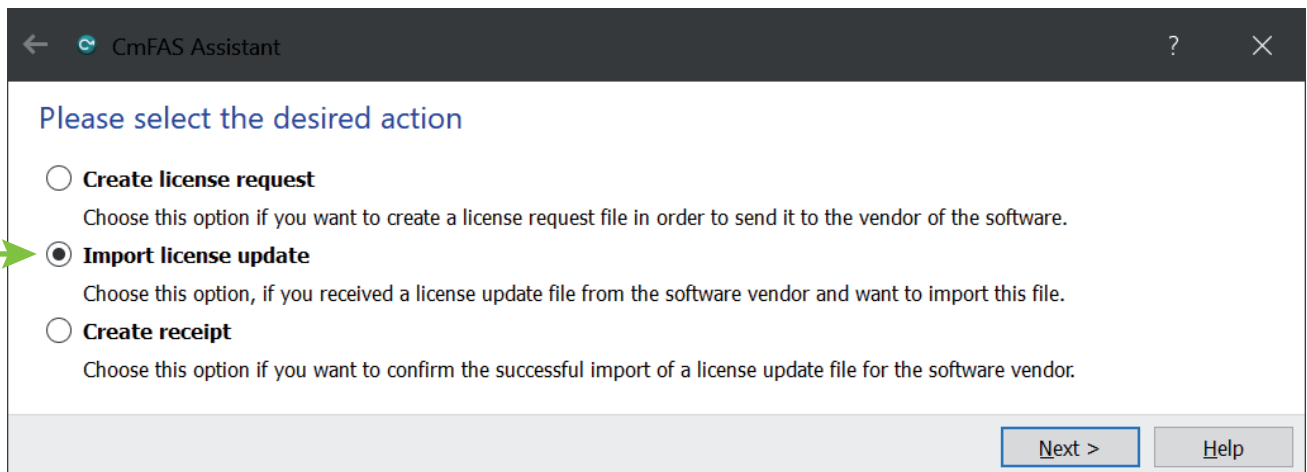

- the license request file generated in step 2
- company name, company address, name of the person the license should be tied to
- "License number" and "Numeric code" (see delivery note)
- email address which should receive the license activation file to be awarded by AND in a timely manner.

4 License update

After receiving the license activation email, save the attached activation file in a convenient location.

Now start CodeMeter Control Center as in step 1 and choose "Activate License" to start the "CmFAS Assistant" again. Click "Next".

Select "Import license update" and click "Next" again.

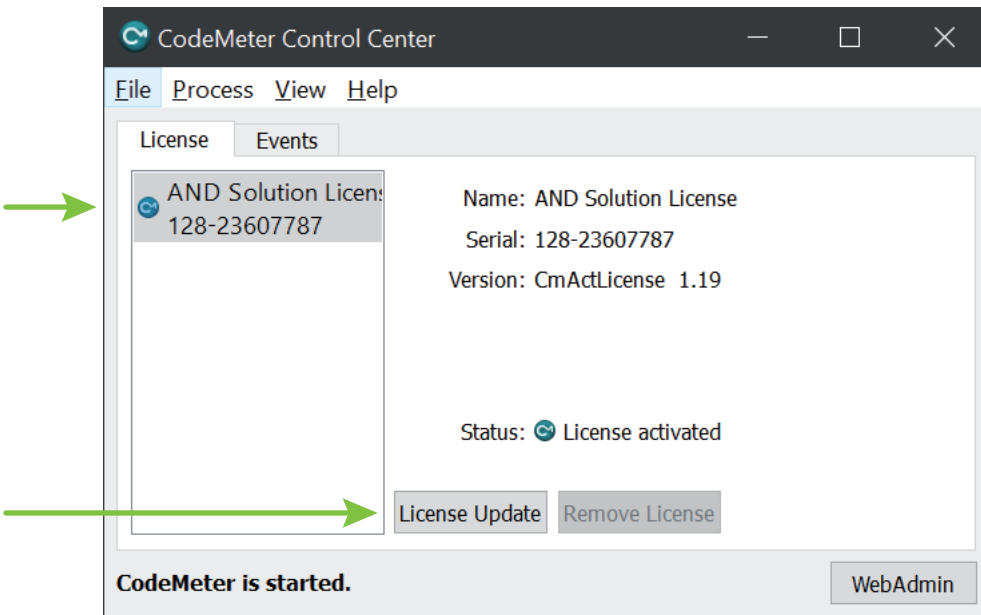

In the file selection dialog choose the saved attachment and click "Commit".

Click "Finish" to exit the assistant. Your license is now active and can be used.

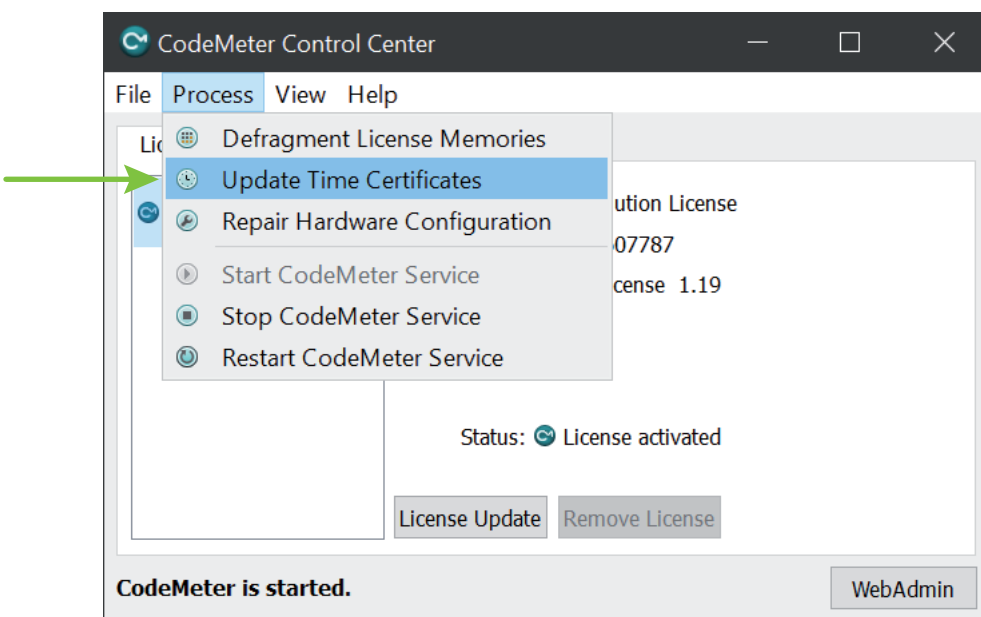

5 Update Time Certificates

Because of the temporary use of the AND Demo, you must update the Time Certificates.

In "CodeMeter Control Center" select the activation file you received from AND and click "License Update".

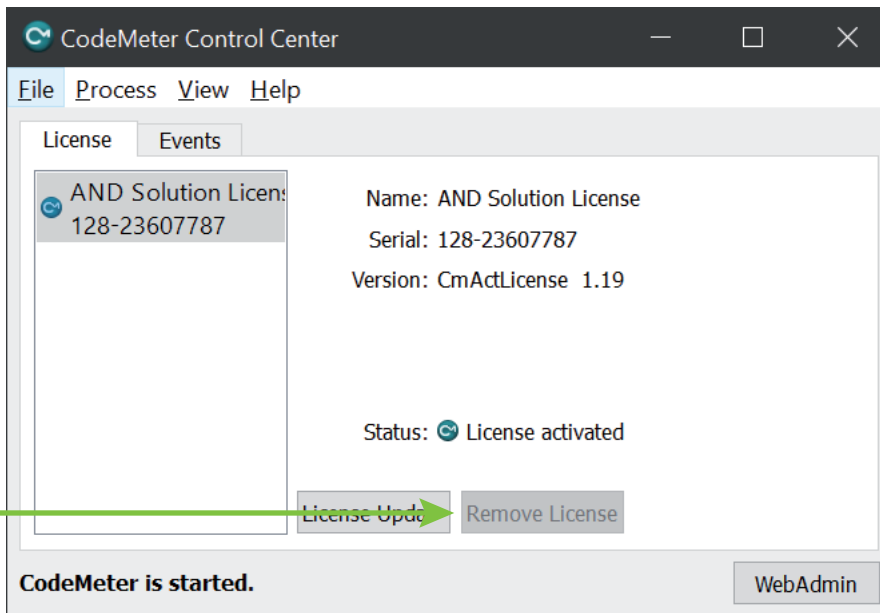

Choose "Update Time Certificates" from the "Process" menu.

! Attention

After installing the license do NOT select the option "Remove License".

This is a command which can not be revoked and excludes the reinstallation of the license file.
