

## AND ProductInformation EditClients: FibreManagement *Interim*

### *Design and documentation for fibre networks*

AND FibreManagement with integrated CAD and engineering functions provides a comprehensive solution for designing and documenting FTTx network architectures including FTTH, FTTP, G.fast, FTT-Mast, OLAN, etc. applications, in a highly visible, intuitive and efficient manner.

Detailed information about all network components is available including settings, build status, calculation, geo-reference, and address.

AND FibreManagement is available as part of the AND SystemSolution or as a stand-alone application.
