

## AND Professional Services: Consultancy *Interim*

### *Get the most out your software solution*

With AND Consultancy we can help you get the most out of your software solution for example by reviewing workflows, setting up company rules and templates, definition and configuration of interfaces to external systems, e.g. address database, as well as initiation of change requests.

With AND playing an important and central role it is often necessary to interface to other systems, e.g. CRM, ERP, monitoring, etc. Here AND provides SOAP, WMS, etc. interfaces allowing quick and uncomplicated provision of the required interfaces. Normally such interfaces are implemented and tested within a number of days.
